Education

University of Illinois Urbana-Champaign — Champaign, IL
Master of **Computer Science** — 2026 – 2027

University of Illinois Urbana-Champaign — Champaign, IL
Bachelor of Science in **Statistics**; Minors in **Computer Science** and Data Science — 2022 – 2025

Skills

Languages: Python, SQL, R, JavaScript, CSS, HTML, C++, Java
Libraries: Pandas, NumPy, Scikit-Learn, Matplotlib, Boto3, TensorFlow, PyTorch
Frameworks & Tools: CI/CD, Azure DevOps, Git, Flask, React.js, Streamlit, Vercel, Power BI, Tableau, Grafana
Cloud & Platforms: AWS (S3, Lambda, EC2, SageMaker, CloudFormation, API Gateway)

Experience

Data Scientist Intern — Aug 2026 – Present
Synchrony

- Developing and deploying an application to Synchrony's newly provisioned AWS account: an interactive dashboard consolidating BI insights alongside advanced forecast modeling for the Forecasting & Advanced Modeling team.
- Work under Sid Chakravarty, VP of Enterprise AI & Analytics, gaining hands-on exposure to AI strategy, decision intelligence, and forecasting/MLOps initiatives.

Software Engineer Intern — May 2025 – Aug 2026
Caterpillar Inc. — Chicago, IL

- Built CI/CD pipelines in GitHub Actions with reusable workflows and custom actions, layered with an LLMOps automation system for autonomous remediation, risk prediction, and RAG-based observability.
- Migrated Azure Pipelines to GitHub Actions and partnered with Security and CloudOps teams to modernize CI/CD infrastructure and ensure full automation coverage.
- **Achieved 100% audit test coverage** for a decades-old production codebase, and built observability dashboards (CloudWatch, Prometheus, Grafana) to monitor deployed ML systems.

Software Engineer Intern — May 2024 – May 2025
State Farm — Bloomington, IL

- Developed and productionized a CNN-based car seat classification system deployed for direct customer use.
- Built and validated a labeled image dataset from scratch, enabling scalable model training and real-time inference.
- Implemented preprocessing and analytics pipelines with Pandas and NumPy to support production ML workflows.

Projects

LedgerOne: FinTech Ledger & Credit Risk Platform — Python, dbt, DuckDB — Sep 2025 – Aug 2026

- Built a fintech ledger and dbt/DuckDB analytics warehouse (staging, star schema, 5 reporting marts), **gated end-to-end by automated schema and integrity tests.**
- Extended into a credit-risk module (vintage, roll-rate, CECL reserve modeling), **validated within 0.19pp of real Freddie Mac mortgage outcomes on a holdout backtest.**

JimmyChops: Barber Booking Platform — React Native, TypeScript, React, Supabase — Oct 2026

- Built and scaled a full-stack booking platform for a local barbershop, replacing an outdated paid Wix site; **live on the App Store serving 300+ monthly customers** with a **validated 10% increase in new clientele.**
- Enforced transactional booking logic in Postgres with row-level security, achieving a **confirmed 0% double-booking rate**; in-app calendar sync and messaging cut manual scheduling contact, **saving an estimated 5 hours/week.**

Roster & Revenue Optimization Dashboard — Python, React, Recharts — Aug 2026 – Present

- Built an interactive analytics dashboard (React, Recharts, custom SVG) for **Illinois Athletics** leadership, visualizing how the NCAA's House v. NCAA revenue-sharing cap is allocated and whether player pay tracks on-field production.
- **Integrated into the department's internal backplane platform**, confirmed for production rollout **(Jan 2027)**; automating an API-fed pipeline so the dashboard auto-populates after every game, replacing a manual Excel/SharePoint workflow.
